

SAN DIEGO PALM PROTECTION

OWNER-LED PALM PORTFOLIO STEWARDSHIP

# Know each priority palm. Keep the history. Plan what comes next.

A palm-specific system for managed properties: stable identities, condition records, recurring planning, licensed treatment within scope, and coordinated response.

**Standardize the stewardship system; customize the property scope.**

## Two ways to engage

Begin with a defined baseline or establish the recurring annual relationship.

### Palm Portfolio Baseline

A defined initial engagement for a property without an organized palm record.

- Walkthrough, known-history intake, and priority-palm identities
- Baseline photographs and visible-condition records
- Immediate concerns and preservation priorities
- Recommended care, treatment, documentation, and coordination scope
- Property-specific proposal for continuing work

### Annual Palm Stewardship Program

The core recurring relationship, tailored to the palms and management responsibilities.

- Maintained palm register and scheduled care visits
- Licensed preventive protection and treatment within scope
- Dated condition, treatment, and supplied work history
- Material-change alerts and preservation priorities
- Specialist coordination, portfolio summary, and next-cycle planning

**California SB(Micro) and DVBE | Certification ID 2054261**

Approved through October 31, 2029 | Verify at caleprocure.ca.gov

Direct palm treatment and records; removal and other contractor work coordinated under a defined scope.

**Request a Property Walkthrough**
